

# SELFTRACE for Business Leaders

A commercial piece that explains why understanding the real operating style of talent reduces cost and improves outcomes.

**CEOs, founders, general management, finance, HR, and business leaders**

Focus

**SELFTRACE for Business Leaders**

Core

**Scientific + actionable**

SELFTRACE helps reduce the cost of hiring blindly by making the professional behavioral layer of talent more visible. It does not moralize or label: it shows how a person tends to operate, which contexts favor them, and where friction may appear before it becomes operational loss or early turnover.

## Current platform capabilities

- Identity cartography by life areas with history and cumulative reading.
- Identity biography and emotional state to go deeper than the core pattern.
- Holistic diagnosis, contextual behavioral summary, and structured prompts for external AI.
- Apply as case workshop, historical inventory, and dedicated file card.
- Reusable libraries of actors, contexts, and environments to enrich real cases.
- Reports, PDFs, and shareable outputs with host branding.
- Link-based sharing and curated outputs for private or carefully public contexts.

## What makes this valuable

- Adds a practical layer of human insight for hiring, onboarding, and talent development.
- Helps detect compatibility, friction risk, and better performance conditions.
- Turns behavioral uncertainty into clearer judgment criteria for leaders and HR.

## Use cases

- Hiring and selection processes with fewer blind spots.
- New talent integration with better fit between manager, role, and context.
- Team design, emerging leadership, and early-turnover prevention.

## Relevant benefits for this sector

- Reduces losses from inefficient onboarding, poor assignment, and avoidable strain.
- Improves the quality of fit, complementarity, and development decisions.
- Adds a more useful professional narrative for talent, culture, and people analytics.

## Sharing notes

- Ideal for demos with executives, business owners, and talent leaders.
- Turns an abstract proposition into a clear argument around savings, compatibility, and organizational maturity.
- Very useful when positioning SELFTRACE as human infrastructure, not just software.

## Scientific and operational basis

SELFTRACE combines deterministic pattern reading grounded in psychological flexibility, traits, and attachment theory. External AI can expand language, reflection, or coaching; the core detection still relies on reproducible rules and now also translates into cross-cutting reports and applied case files.
