SELFTRACE for Companies and HR

Core
Scientific + actionable

SELFTRACE adds a guided self-observation layer so people can understand how they react under pressure, conflict, demand, uncertainty, or fatigue. That opens better conversations around hiring, promotion potential, leadership, and development without depending only on rigid testing.

Current platform capabilities

- Identity cartography by life areas with history and cumulative reading.
- Identity biography and emotional state to go deeper than the core pattern.
- Holistic diagnosis, contextual behavioral summary, and structured prompts for external AI.
- Apply as case workshop, historical inventory, and dedicated file card.
- Reusable libraries of actors, contexts, and environments to enrich real cases.
- Reports, PDFs, and shareable outputs with host branding.
- Link-based sharing and curated outputs for private or carefully public contexts.

What makes this valuable

- Micro-scenarios that translate workplace tension into observable choices.
- Pattern, cost, and alternative readout in clear language.
- Useful history for leadership, internal mobility, and learning.

Use cases

- Hiring, development, feedback, and first-time manager processes.
- Promotion analysis, emerging leadership, and critical talent review.
- Culture, learning, and prevention of behavioral exhaustion.

Relevant benefits for this sector

- More concrete people conversations and less abstraction.
- Better ability to spot repeated friction before burnout grows.
- A modern experience for selection, development, and retention.

Sharing notes

- Strong fit for talent, leadership, and behavioral upskilling initiatives.
- Can be introduced as a development tool or as an initial HR experience.
- Does not replace formal assessment: it improves self-reading and judgment conversations.

Scientific and operational basis

SELFTRACE combines deterministic pattern reading grounded in psychological flexibility, traits, and attachment theory. External AI can expand language, reflection, or coaching; the core detection still relies on reproducible rules and now also translates into cross-cutting reports and applied case files.
